

GRMS

A modern hotel guest room featuring a large bed with white linens and a patterned pillow. The headboard is a dark wood with a geometric design. The wall is covered in a textured, woven fabric. There are three framed artworks on the wall: a blue abstract piece, a small black and white photo, and a large black silhouette of a horse. A bedside table with a lamp is visible on the left, and a patterned rug is on the floor.

WHAT IS SERENITY GRMS (GUEST ROOM MANAGEMENT SYSTEM)

Serenity Guest Room Management System (GRMS) is a state-of-the-art management system that utilizes the Internet of Things (IoT) technology. Designed specifically for hotels, resorts, and other accommodation establishments, this innovative system aims to enhance guest comfort and satisfaction while maximizing energy efficiency.

The Central Room Control Units, installed in every guest room of your establishment, provide a convenient interface for your guests to interact with the GRMS. Through this user-friendly interface, guests have control over various aspects of their rooms such as lighting, temperature, curtains, audio-visual devices and other technological features – all from the comfort of their beds.

LIGHTING CONTROL

Our lighting system allows guests to effortlessly adjust the brightness, turn lights on or off, and even create custom lighting scenes. With this level of control, we ensure that every guest can personalize their environment for optimal comfort. Not only does our system enhance the guest experience, but also it promotes energy efficiency and aligns with sustainability efforts in preserving nature.

AIR CONDITIONING CONTROL

Your guests have the ability to adjust the heating or cooling levels to suit their preferences and manage both fan speed and air conditioning options. With Serenity GRMS, advanced energy-saving measures are implemented by automatically adjusting the temperature when rooms are unoccupied, thanks to its smart detection of guests' presence.

MEDIA AND ENTERTAINMENT CONTROL

Guests have the convenience of easily controlling audiovisual devices in their rooms through Serenity GRMS. They can effortlessly connect their own technological devices to the in-room entertainment system. Whether it's accessing TV channels, adjusting volume levels or playing media from their personal devices, guests have complete control over their audiovisual experience.

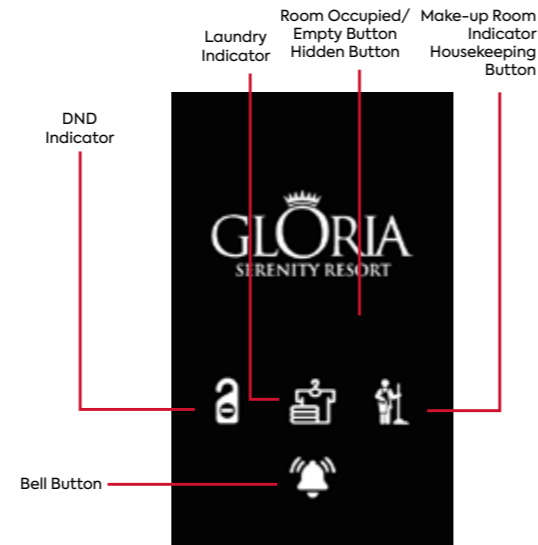

CURTAIN CONTROL

By utilizing Serenity GRMS, you can conveniently control and manage various room assets like curtains, blinds, or shades. This intelligent curtain control feature plays a crucial role in optimizing energy consumption by automatically closing the curtains when your guests are not occupying their rooms. As a result, this prevents unnecessary overheating and helps to keep your budget intact.

GUEST SERVICES AND NOTIFICATION MANAGEMENT

Our innovative Serenity GRMS offers seamless integration with your business's asset management system, enhancing the overall guest experience. Through our advanced technological interface and mobile applications, guests can easily request services such as housekeeping, room service, wake-up calls, or maintenance.

REDEFINE PERSONALIZED GUEST EXPERIENCE, DATA MANAGEMENT AND ENERGY SAVING WITH GRMS!

With Serenity GRMS in place, businesses can establish specific benchmarks for performance and effortlessly deliver up-to-the-minute insights to their teams. This comprehensive system offers the ability to access real-time information on key variables like room temperature, humidity levels, and oxygen concentrations within hotel accommodations. By leveraging this data-driven platform, users have a distinct advantage of being notified about potential issues even before guests are impacted.

INTEGRATION AND CENTRAL CONTROL

The Serenity GRMS boasts a cutting-edge design that enables efficient control and monitoring of all guest rooms through a central management system. Hotel personnel are empowered to seamlessly access the system, allowing them to closely monitor guest room status, efficiently troubleshoot any issues that may arise, effectively manage energy consumption, and make necessary adjustments remotely.

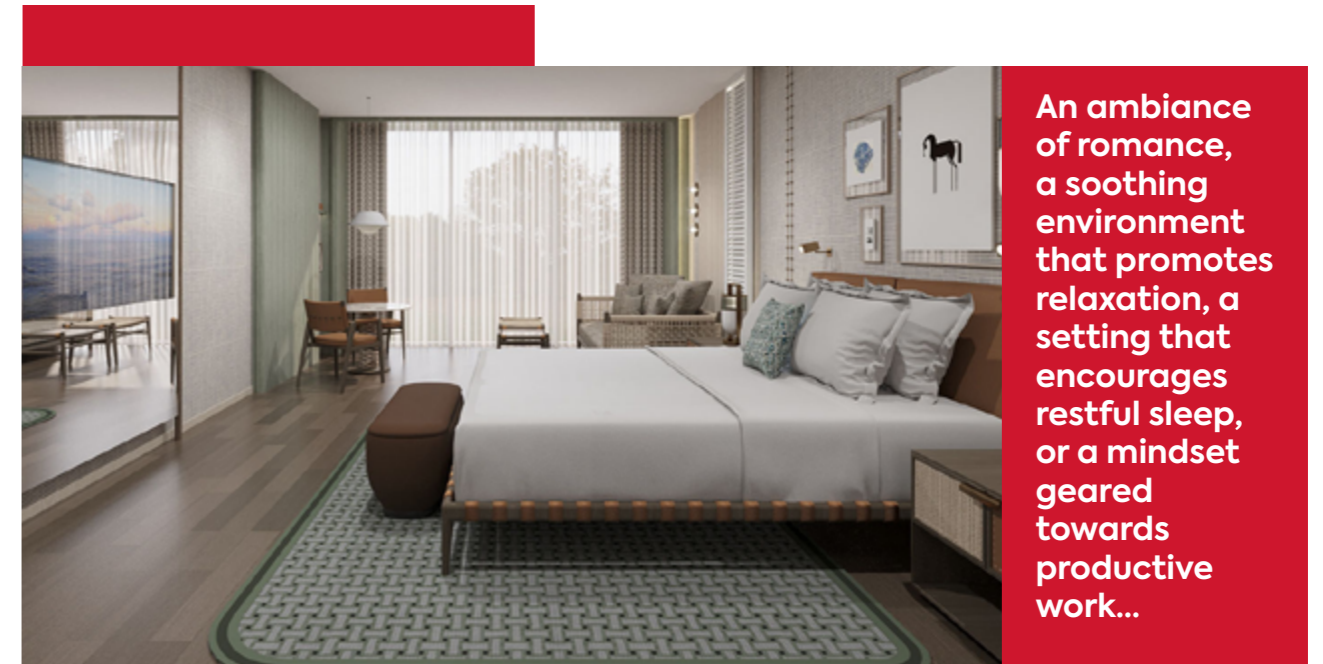

By analyzing the data you collect, we offer comprehensive big data management services. Our expertise allows us to uncover valuable insights and propose effective solutions that enhance energy efficiency, streamline operations, and elevate guest comfort levels.

UNLOCK THE POTENTIAL OF THE FUTURE IN THE HOSPITALITY INDUSTRY AND ILLUMINATE IT WITH EFFICIENT LIGHTING MANAGEMENT SOLUTIONS!

The enhanced capabilities of the DALI protocol offer extensive control over dimming and color variations, allowing for precise adjustments to lighting levels.

With just a simple touch, your guests can effortlessly activate pre-programmed lighting scenarios designed to set the perfect mood. Additionally, they have the flexibility to adjust the intensity of each scenario using a single button press, ensuring seamless harmony within their preferred ambiance without any disruption.

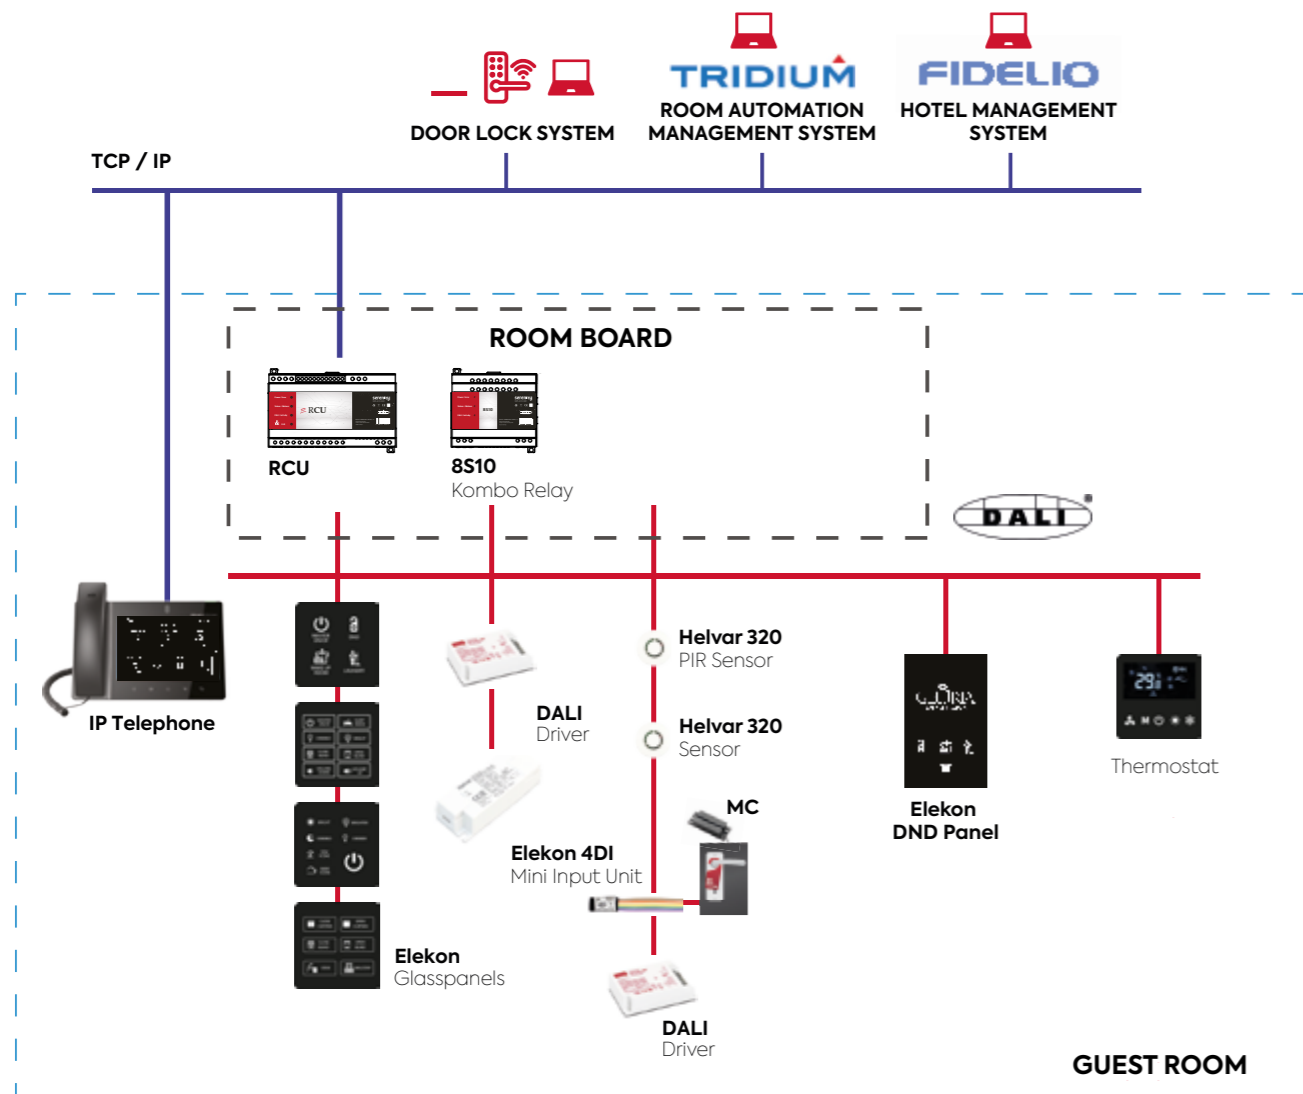

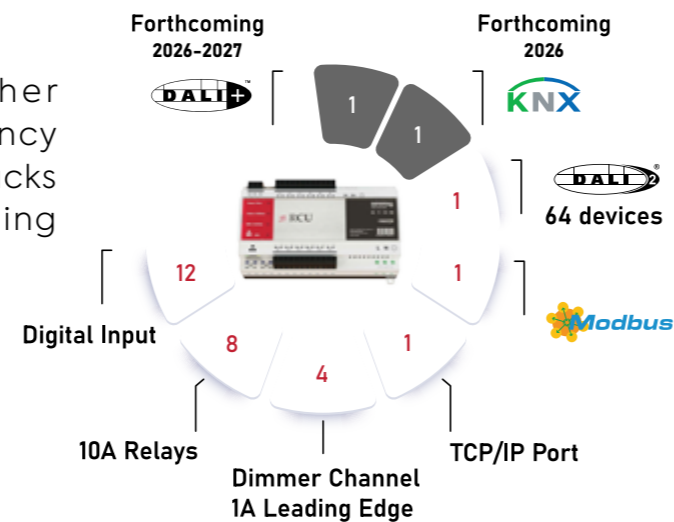

GLORIA GOLF RESORT HAS IMPLEMENTED AN ADVANCED ROOM AUTOMATION SYSTEM PROVIDED BY SERENITY GRMS

The Serenity GRMS solution forms the foundation of the room automation infrastructure at Gloria Serenity Resort in Antalya. This sophisticated system is designed to achieve significant energy savings by automatically transitioning into an energy-saving mode when guests are not present in their rooms.

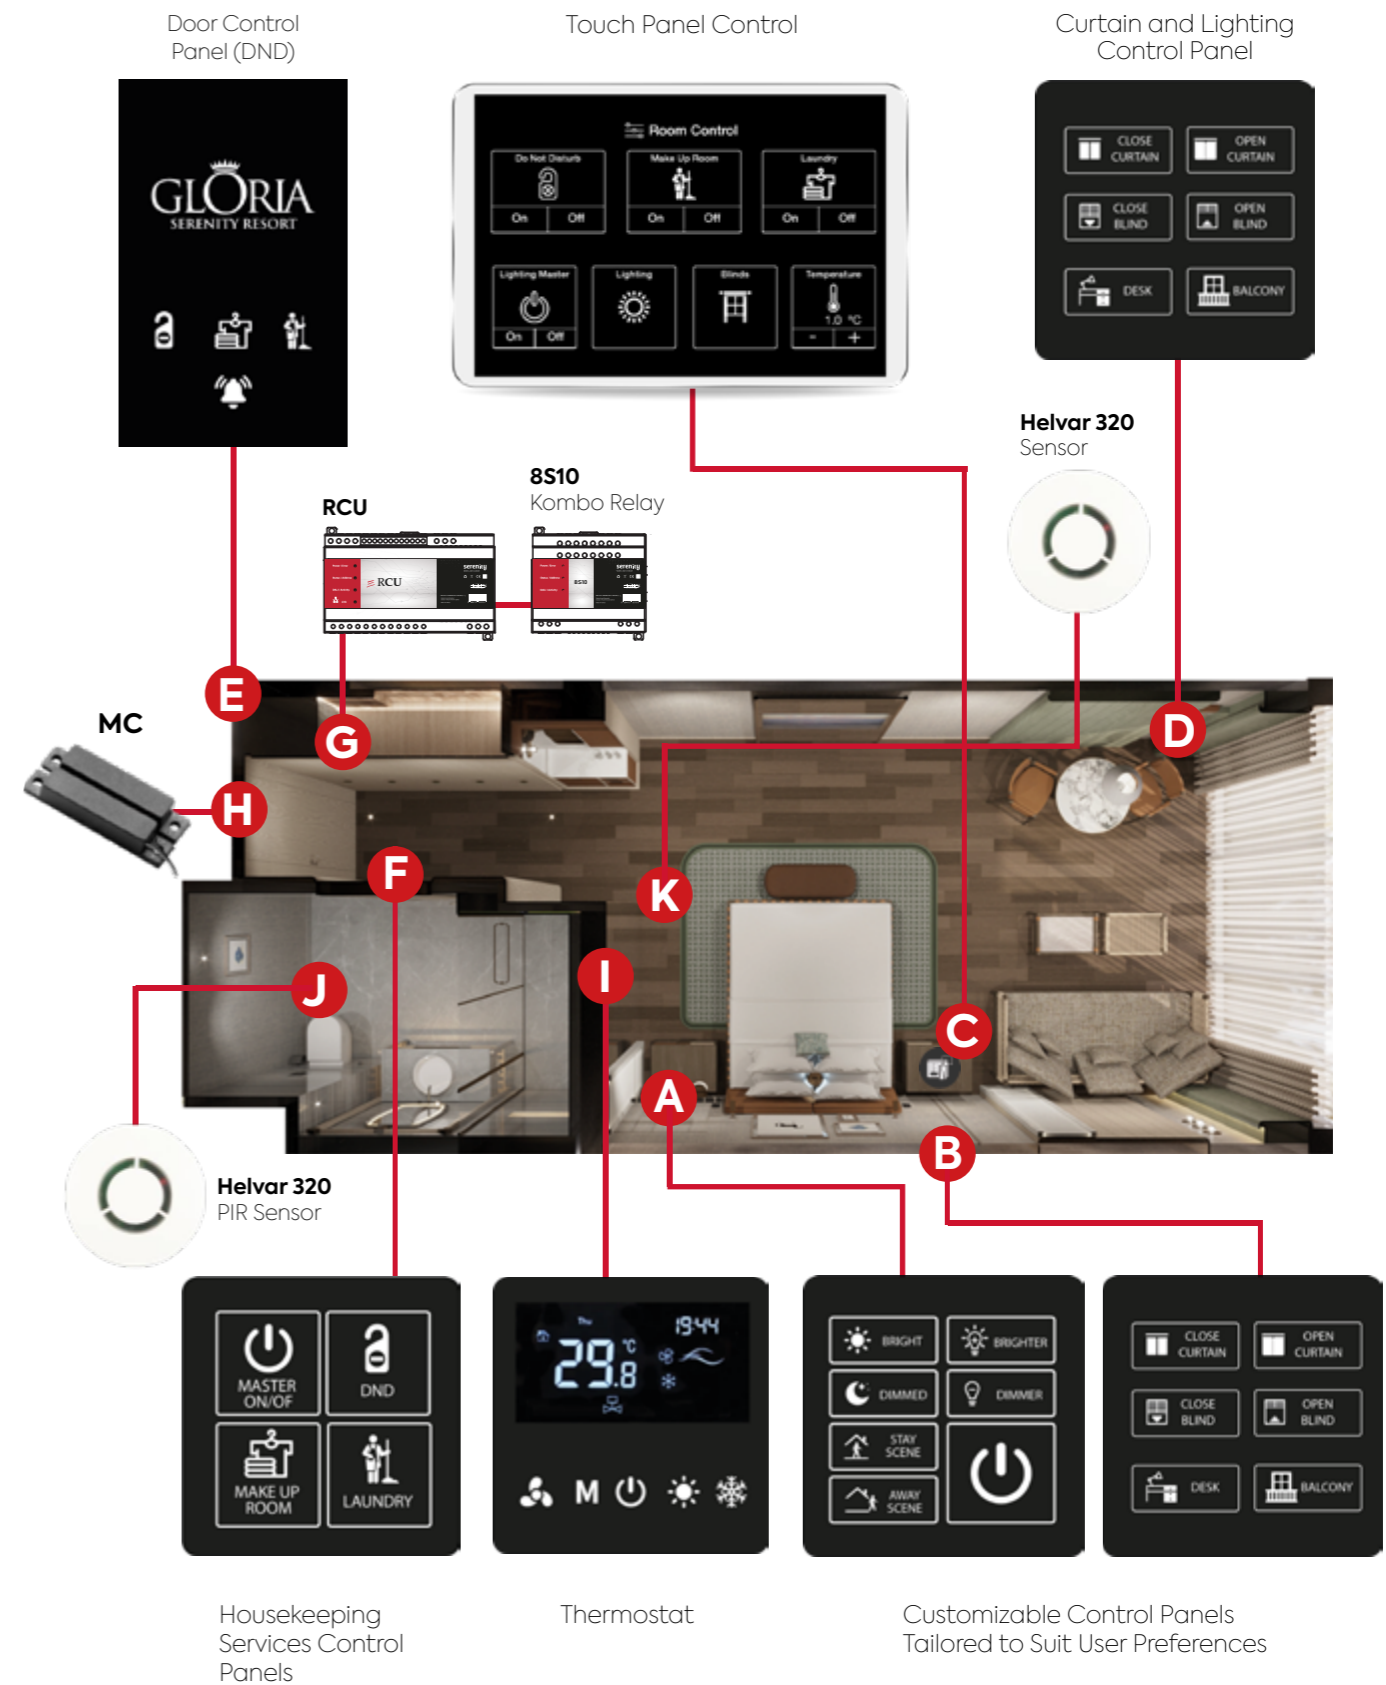

Our advanced system offers real-time monitoring of key variables in hotel rooms, such as temperature, humidity, and oxygen levels. By promptly alerting the Gloria Golf Resort team to any potential issues, we ensure that guests are not impacted by adverse situations.

The Gloria Golf Resort can also gather valuable data on the operational efficiency of its business by utilizing a system that tracks and reports the time consumed for cleaning services to be completed.
